

Neurological protocol

After balance wrap the head with the pads (Eyemask over the throat area, local pad on the back of the head over occipital ridge and the body pad over the top of the head like a bonnet) and do setting 2 and 6 for 10 mins. each, and then place the local and body pads on the spine from tailbone up, eyemask on the skin over the liver and run the same settings as above. In total they will be getting 15mins. Proprioception, 20 mins. around the head, and then 20 mins. on the spine.

Do the above for 3 weeks once daily with the person and then keep the pads in the same place but change the settings to 10 mins. of 3, 5 mins. of 4, and 5 mins. of 5.

Option:

They can do the first part in one session if time is an issue, in the morning if they like, balance protocol and head wrap, then in the evening, balance protocol and the tailbone spinal part.

The above protocol is designed to address the energy points relative to neurological issues in general.

Suggested Neuro Protocol

Balance protocol first. Then, place body pad over top of head, ends towards ears, local pad on back of head, eye mask over thyroid. Run setting 2 for 10 minutes, then setting 6 for ten minutes. Do 2-3 times a week for 6 sessions to clear toxins. Then, using same pad placement, use settings, 3, 4, 5 for 5 minutes each for three weeks, 3 times a week. Then use setting 7 for five minutes, working up to ten minutes, once per week.
